The decapped intact mRNA was ligated with DNA-RNA linker including EcoR is site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The CDNA vector was adjusted to have about 60nt. The CDNA vector was circularized with E. coll DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coll ToplOF' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

/note="Organ: Stomach; Vector: pT218RP1; Site_1: EcoRI: Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coll DNA ligase after digestion of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BM764661 S3SNU16s1 Homo sapiens cDNA clone S3SNU16s1-7-H02 5',

ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The CDNA libraries constructed by this method are full-length enriched CDNA library. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library, the abundant CDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of blottinylated single stranded RNA by in vitro transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded CDNAs prepared from original
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  71 CGITCAGAIGCCITTCTCCTITCCCATGCCCCACTICATCCTCTTGTCTTTACGGTTC 130

BM781532 591 bp mRNA linear EST 05-MAR-2002 K-EST0058109 53SNU16s1 Homo sapiens cDNA clone S3SNU16s1-19-B07 5',

mRNA sequence. BM781532

DEFINITION

RESULT 6 BM781532

```
/note="Organ: Stomach; Vector: pTz18RP1; Site_1: ECORI; Site_2: Not1: The poly (A)+ RNA was dephosphozylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including ECOR I site by treatment of T4 RNA ligase and the first strand CDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60Mt. The CDNA vector was circularized with E. coli DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained CDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched CDNA library. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single stranded RNA by in vitro transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted constructed by transformation of the commandance of the constructed by transformation of the constructed by transformation of the constructed.
                                                                                                                                                                          Kim, M.R.,

adjusted to larve about oute. The cura vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA libraries and library. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5 primer and N(dT)14 as 3 primer. The PCR products were used as template for synthesis of blotinylated single stranded RNA by in vitro transcription reaction. The Synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E. coli IoplOF' with electroporation method."
                        /note="Organ: Stomach; Vector: pTZ18RP1; Site_1: ECORI; Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including ECOR I site by treatment of T4 RNA ligase and the first strand CDNA was synthesized from Oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The CDNA vector was

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note="Organis Stomach; Vector: pTz18Rp1; Site_1: ECORI; Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including ECOR I site by treatment of T4 RNA ligase and the first strand CDNA was synthesized from Oilgo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coll DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayèma-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coll ToplOF' by electroporation method. The CDNA libraries constructed by this method are

The sequence contained an oligo-dr track that was present in the oligonucleoride that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dr track served to verify it as a clone from the normalized placenta library CDNA Library Preparation: M.B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
            sequencing about 2.000 -3.7000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5 primer and N(dT)14 as 3 primer. The PCR products were used as template for synthesis of biotinylated single stranded RNA by in vitro transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original liberary and incubated with avoidin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E. coli ToplOF' with electroporation method."

/note="Organ: Stometh; Vector: pTz18RP1; Site_1: ECORI; Site_2: Not1; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including ECOR I site by treatment of 4 RNA higase and the first strand CDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The CDNA vector was circularized with E. coli DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The cDNA betained cDNA vectors were used for transformation of competent cells E. coli TOPIOF, by electroporation method. The CDNA libraries constructed by this method are full-length enriched cDNA library. After analyzing and sequencing about 2,000 - 3,000 colonias in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single stranded cDNAs prepared from original liberary and incubated with approach entity of the subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E. coli TopIOF' with electroporation method."

                                                                                                                                                                                                                                                                                            ó
                                                       The present sequence was given in a specification relating to an isolated trat gangloside GM_1:specific alphal-2fucosyltransferase protein. The protein or its cellular fraction is useful for synthesis of a molecule comprising Fucalphal-2calbetal-3GalNAc, a glycolippid, glycoprotein, glycolipportein or a free oligosaccharide comprising fucalphal-2dalbetal-3GalNAc. The method involves contacting alphal-2dalbetal-3GalNAc. The method involves contacting alphal-2dalbetal-3GalNAc. The which GDP fucose and a molecule or glycolippid, glycolipportein or oligosaccharide having a terminal by contacting the protein with GDP-fucose and ganglioside GM_1. The by contacting the protein with GDP-fucose and ganglioside GM_1. The bottal-3GalNAc glycolipporteins, glycolipporteins, glycolippids and ganglioside and fucosyl-GM_1 is useful for inducing an immunocherapeut. Or immunosuppressive action against cancer, neurological disease or small cell lung carcinoma.

The invention relates to rat GMI-specific alphal-2fucosyltransferase
(alphal-2FucT) enzyme and its corresponding nucleic acid. This nucleic
acid is specific for a carbohydrate moiety found in ganglioside GMI,
acid is specific for a carbohydrate moiety found in ganglioside GMI,
acid is specific for a carbohydrate moiety found in ganglioside GMI,
acteminal galactose betal-3N-acetylgalactosamine (Galbetal-3GalNAC)
saccharide. Alphal-2FucT DNA is useful for producing rat alphal-2FucT
protein by recombinant techniques. Alphal-2FucT DNA is useful for the
protein by recombinant techniques. Alphal-2FucT DNA is useful for detecting oncogenic transformation which
alphal-2FucT DNA is useful for detecting oncogenic transformation which
involves assaying for changes in expression of alphal-2 FucT. Since
alphal-2FucT is activated in cell transformation, antisense sequences
derived from alphal-2FucT DNA is useful in gene therapy and
cor treating cancer. Alphal-2FucT DNA is useful in gene therapy and
characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rat hepatoma H35 cell alphal-2fucosyltransferase, useful for producing GMI-specific alphal-2fucosyltransferase enzyme by recombinant techniques and for detecting oncogenic transformation of test tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RDSEQHGNGELRGMFTINSIGRLGNQMGEYATLFALARMNGRLAFIPASMHNALAPIFRI 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is given in a specification relating to a rat ganglioside GM_1-specific alphal-2fucosyltransferase protein. The protein or its cellular fraction is useful for synthesis of a molecule comprising Fucalphal-2galbetal-3galNac, a glycolipid, glycoprotein, glycolipoprotein or a free oligosaccharide comprising Fucalphal-2galbetal-3galNac. The method involves contacting alphal-2fucosyltransferase with GDP-fucose and a molecule or glycolipid, glycoprotein, glycolipoprotein or oligosaccharide having a terminal Galbetal-3galNac group. It is also useful for synthesis of fucosyl-GM_1 by contacting the protein with GDP-fucose and ganglioside GM_1 The obtained glycoproteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New rat ganglioside GMI-specific alphal-2Fucosyltransferase, useful for preparation of fucosyl GMI which is useful as a nutritional composition or immunotherapeutic for cancer and neurological diseases -

The invention relates to rat GMI-specific alphal-2fucosyltransferase (alphal-2rur) enzyme and its corresponding nucleic acid. This nucleic acid is specific for a carbohydrate moiety found in ganglioside GMI, a terminal galactose betal-3M-acetylgalactosamine (Galbetal-3GalNAc) saccharide. Alphal-2rur DNA is useful for producing rat alphal-2rur protein by recombinant techniques. Alphal-2rur DNA is useful for the preparative synthesis of fucosyl containing glycolipids, glycoproteins, glycollipoproteins and oligosaccharide, and for preparing fucosyl-GMI. Alphal-2rur DNA is useful for detecting oncogenic transformation which involves assaying for changes in expression of alphal-2rur. Since alphal-2rur DNA is useful for inhibiting, suppressing curvated from alphal-2rur DNA are useful for inhibiting, suppressing antisense therapy. The present sequence is rat hepatoma H35 cell
                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                   207

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  QΫ́
```

```
This polypeptide comprises porcine secretor glycosyltransferase

(SE or FUI2), a type II integral membrane protein has high affinity

(SE or FUI2), a type II integral membrane protein has high affinity

(Cor type I and type III substrates. Its amino acid sequence was

deduced from the nucleotide sequence of a genomic DNA clone (see

AAV29003) isolated from a pig Ilver library on the basis of homology

(Cor thuman FUI2 cDNA. Pig FUI2 shows 83.2% identity with human FUI2.

Expression of a glycosyltransferase, such as porcine Se, in a

tissue results in reduced expression of unwanted carbohydrate

c pitopes on the tissue, especially porcine heart, liver, kidney or

pancreas, rendering if more suitable for transplantation, i.e. less

immunogenic and of increased immunological acceptability. A

claimed method of producing a cell from a donor species that is

immunologically acceptable to a recipient species sinvolves reducing

levels of carbohydrate on the donor cell that causes it to be

recognised as non-self by the recipient by expressing a nucleic

acid for a glycosyltransferase such as porcine Se in the cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              121 SLPVLHSDTAKKIPWQNYHLNDWMEERYRHIPGHFVRFTGYPCSWTFYHHLRPEILKEFT 180

                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents pig secretor used in an example of the present invention. The present invention describes nucleic acids (NA) encoding a chimeric glycosyltransferase. The NAs comprises a catalytic domain of a first glycosyltransferase (GT) and a localisation signal of a second GT, whereby when the NA is expressed in a cell and where the cohimeric enzyme is located in an area of the cell where it is able to compete for substrate with a second GT, resulting in reduced levels of a product from the second GT. The NAs can be used to produce cells and organs with desired glycosylation patterns. Products and methods of the present invention can be used to reduce the levels of undesirable epitopes in cells, tissues or organs which may be used in transplantation or gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RDSEQHGNGELRGMFTINSIGRLGNQMGEYATLFALARMNGRLAFIPASMHNALAPIFRI 120

The DNA encodes a alpha(1,2) fucosyltransferase and is the Secretor alpha(1,2) fucosyltransferase locus, that cross hybridises with the H blood group alpha(1,2)fucosyltransferase gene. The DNA is useful for producing a recombinant human GDP-L-fucose:beta-D-galactoside 2-alpha-L-fucosyltransferase (FUT2) which can be used for genotyping an individual as a secretor or nonsecretor as it is known that nonsecretors homozygous for a mutant allele of the FUT2 gene that has a stop codon in the position corresponding to amino acid 143.

The functional protein is represented by amino acids 33 to 365. The enzyme produced by the DNA sequence can be used in enzymatic fucosylation of chain-terminating galactose residues on lactosemine or neolacto type beta-D-galactoside to alpha-2-L-fucose residues. See also AAR13749-R13752.

The protein of its useful for synthesis of a molecule comprising Fucalphal-2dalbetal-3dalNac. a glycolipid, glycoprotein, glycolipoprotein, glycolipoprotein, glycolipoprotein, glycolipoprotein, glycolipoprotein or a free oligosaccharide comprising Fucalphal-2dalbetal-3dalNac.

The method involves contacting alphal-2fucosyltransferase with GDP-fucose and a molecule or glycolipid, glycoprotein, glycolipoprotein or oligosaccharide protein or coligosaccharide glober fucosyl-GM_1 by contacting the protein with claps and ganglioside GM_1. The obtained glycoproteins, glycolipoproteins, glycolipoproteins, glycolipoproteins, glycolipoproteins, glycolipids and glocosyl-GM_1 is useful for inducing an immunotherapeutic or immunosuppressive action against cancer, neurological disease or small cell lung carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   rat ganglioside GML-specific alphal-2Fucosyltransferase, useful for sparation of fucosyl GML which is useful as a nutritional composition immunotherapeutic for cancer and neurological diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; Sec2; alphal-2fucosyltransferase; cytostatic;

GDP-L-fucose-beta-D-galactoside 2-alpha-fucosyl-transferase (Fuc-T) is encoded by cDNA (AAO98461) isolated from a human epidermal carcinome cell line. The enzyme is responsible for the synthesis of 2'-fucosyllactose, one of the oligosaccharides in human milk. Other products of Fuc-T include glycoprofisms contg. beta-linked terminal galactose residues which can be fucosylated by Fuc-T. This DNA can be used to produce non-human transgenic mammals able to produce secondary gene products, e.g. oligosaccharides, in their milk. The transgenic mammals milk biochemically resembles human milk. This humanised milk can be used in the prepn. of an enteral nutritional product useful in the nutritive maintenance of an animal.
                                                                                                                                                                                                                                                                                                                                                                                                               57 PEMRRDSEQHGNGELRGMFTINSIGRLGNQMGEYATLFALARMNGRLAFIPASMHNALAP 116

                                                                                                                                                      2-Alpha-fucosyltransferase (AAR70422) is encoded by a cDNA clone (AAR01083) isolated from a human epidermal carcinoma A431 library. The enzyme can be expressed in the milk of a transgenic mammal, esp. cow. This allows large-scale prodn. of oligosaccharides and glycosylated proteins and lipids in the milk.

                                                                                                                                                                                                                                                         Alpha-1,2-fucosyltransferase (AAR70421) is encoded by a cDNA clone (AAT01082) isolated from a human epidermal carcinoma cell line A431 cDNA library. The enzyme can be expressed in the milk of a transgenic mammal, esp. cow. This allows large-scale prodn. of oligosaccharides or glycosylated proteins and lipids in the milk.

                                                                                                                                                                                                                                         The human H-transferase (AAR90572) product of a cDNA clone (AAT12238) prepd. from human epidermoid carcinoma cells (ATCC CRL 155 A-431) can be expressed in xenogeneic organs, tissues and cells using a vector such as pAPEx-1 (AAT1239). This results in decreased expression of the non-human antigen galactose alpha(1.3) galactose on the surface of the organs etc. so that hyperacute rejection is reduced upon transplantation to humans.

A claimed transgenic mouse expresses, in its intestinal epithelial cells, the enzyme human GDP-L-fucose.beta-D-galactoside 2-alpha-L-fucosyltransferase (also called alpha 1.2 FT) or human GDP-L-fucose.beta-D-N-acetylglucosamide 3/4-alpha-L-fucosyltransferase (also called alpha 1.3/4 FT). The enzyme is expressed under the control of a qut epithelial cell-specific promoter and Helicobacter pylori adheres to the transgenic cells. The transgenic mouse and intestinal epithelial cells from it are useful as models for screening compounds for the ability to inhibit adhesion of H. pylori to gut epithelial cells. The present sequence represents human alpha 1.2 FT and was published by Larsen et al., proc.Natl.Acad.Sci.USA, 87:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               57 PEMRRDSEQHGNGELRGMFTINSIGRLGNQMGEYATLFALARMNGRLAFIPASMHNALAP 116
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            71 P-----QH-PASLSGTWTVYPNGRFGNQMGQYATLLALAQLNGRRAFILPAMHAALAP 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       117 IFRISLPVLHSDTAKKIPWQNYHLNDWMEERYRHIPGHFVRFTGYPCSWTFYHHLRPEIL 176

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human GDP-Puc:beta-D-galactoside alpha(1,2)-fucosyltransferase (AAW13640) is an enzyme involved in the expression of type I and II blood group H structures. Its amino acid sequence was deduced from an isolated DNA (AATG1677) derived from human A431 cells. Expression of the fucosyltransferase animal cell lines provides specific capabilities with respect to post-translational modification of the oligosaccharides of expressed proteins or lipids. Specific applns. of the enzyme include enzymatic fucosylation of chain-terminating galactose residues on lactoseamine or neolacto type beta-D-galactoside to alpha-2-fucose residues. The enzyme can also be used to raise antibodies as diagnostic reagents and to screen cpds. for fucosyltransferase inhibitor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New recombinant fucosyltransferase proteins - useful for modifying cell surface oligosaccharide structures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           52.0%; Score 1057.5; DB 18; Length 365; 56.5%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 10, 2 Sequence 10, 2 Sequence 10, 2 Sequence 8, M Sequence 9, M Sequence 11, 2 Sequence 6, M Sequence 11, 2 Sequence 11,

APPLICANT: MCKENZIE, IAN C. F.
TITLE OF INVENTION: NUCLEIC ACIDS FOR REDUCING CARBOHYDRATE EPITOPES
FILE REFERENCE: 30562.50300
CURRENT PALICATION NUMBER: US/09/254,077A
CURRENT FILING DATE: 1997-06-11
PRIOR FILING DATE: 1997-08-22
PRIOR FILING DATE: 1996-08-23
NUMBER OF SEQ ID NOS: 12
SOFTWARE: PATENTIN VOIS: 12
SOFTWARE: PATENTIN VOI: 2.1
                                                                                                                                                                                                                                                                                                                                                                                                    181 LHDHVREEAQAFLRGLRVNGSQPSTFVGVHVRRGDYVHVMPNVWKGVVADRGYLEKALDM

Sequence 11, Application US/0929886

GENERAL INFORMATION:

APPLICANT: Eric H. Holmes et al.

TITLE OF INVENTION: NUCLEIC ACIDS AND PROTEINS OF A RAI GANGLICSIDE

TITLE OF INVENTION: THEREOF

TITLE OF INVENTION: THEREOF

TITLE OF INVENTION: THEREOF

TITLE OF INVENTION: THEREOF

CURRENT APPLICATION NUMBER: US/09/298,886

CURRENT FILING DATE: 1999-04-26
                                                                                                                                                                                                                                                                                                  GENERAL INFORMATION:
APPLICANT: SANDERLY, MAURO S.
APPLICANT: MCKENELE, IAN C. F.
IITLE OF INVENTION: NUCLEIC ACIDS FOR REDUCING CARBOHYDRATE EPITOPES

Patent No. 6399758
GENERAL INFORMATION:
APPLICANT: SANDRIN, MAURO S.
APPLICANT: MCKENZIE, IAN C. F.
TITLE OF INVENTION: NUCLEIC ACIDS FOR REDUCING CARBOHYDRAIE EPITOPES
FILE REFERENCE: 30562.505W0
CURRENT APPLICATION NUMBER: US/09/254,077A
CURRENT FILING DATE: 1999-06-11
PRIOR APPLICATION NUMBER: PCT/AU97/00540
PRIOR FILING DATE: 1997-08-23
PRIOR PLILING DATE: 1996-08-23
PRIOR FILING DATE: 1996-08-23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          54 PTSQRAPSRPLGGMWTINAMGRLGNQMGEYATLYALAKENGRPAYIPAQMHSTLAPIFRI
